the focus of the presented investigations in this thesis is related to on glass printed antennas for a wide frequency band starting from 100 khz up to 900 mhz different numerical methods based on the method of moments are compared to present a solution for virtual antenna development to compare the proposed approaches simulations using each one were performed furthermore important details for antenna system and antenna environment modelling especially those related to ground and antenna amplifiers are given also keyless systems operating at low frequencies as well as roof antenna systems operating at very high frequencies beyond 700 mhz are investigated all proposed virtual processes are validated by measurements valuable computation time can be saved as shown in this work by choosing adequate algorithms

passenger safety and convenience systems is made up of 61 technical papers and articles written in the last decade covering a variety of electronic systems for driver and passenger safety and convenience many papers in this book could arguably be considered in both categories because they provide the driver

passenger with multiple functions of safety and convenience some examples include keyless entry security systems night vision and more this book concludes with a chapter on future development in electronically controlled body and safety systems

this book gathers the latest advances innovations and applications in the field of computational engineering as presented by leading international researchers and engineers at the 30th international conference on computational experimental engineering and sciences icces held in singapore on august 3 6 2024 icces covers all aspects of applied sciences and engineering theoretical analytical computational and experimental studies and solutions of problems in the physical chemical biological mechanical electrical and mathematical sciences as such the book discusses highly diverse topics including composites bioengineering biomechanics geotechnical engineering offshore arctic engineering multi scale multi physics fluid engineering structural integrity longevity materials design simulation and computer modeling methods in engineering the contributions which were selected by means of a rigorous international peer review process highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations
